Diabetes Symptoms

[Print this page](#)
[Email this page](#)

Diabetes often goes undiagnosed because many of its symptoms seem so harmless. Recent studies indicate that the early detection of diabetes symptoms and treatment can decrease the chance of developing the complications of diabetes.

Some diabetes symptoms include:

- Frequent urination
- Excessive thirst
- Extreme hunger
- Unusual weight loss
- Increased fatigue
- Irritability
- Blurry vision

If you have one or more of these diabetes symptoms, see your doctor right away. You can also take our [Online Diabetes Risk Test](#) to find out if you are at risk for diabetes.
